Why does the Accra Call matter to your organization and your community?

Civil society plays a critical role in protecting the most vulnerable and is a cornerstone of the global international development ecosystem—yet it remains disproportionately targeted by cyber threats.

The CyberPeace Institute **endorsed the Accra Call to help close this protection gap through collaboration, transparency, and action.** Our pledge reflects a deep commitment to responsible cybersecurity—ensuring that civil society organizations advancing peace, rights, and humanitarian action can operate securely online.

The **Accra Call is a vital step toward building a more inclusive, resilient, and trusted digital ecosystem,** and reinforces our shared responsibility to protect those on the frontlines of justice.

How has the Accra Call inspired you to take action?

Strengthening cybersecurity for non-profits protects not only their missions but the communities they serve. By engaging governments, the private sector, and international organizations, we are building an ecosystem of trust, resilience, and equity—nation by nation, organization by organization.

The Accra Call has been a **powerful catalyst**, reinforcing our resolve to build a secure and inclusive digital future. It inspired us to expand support for civil society, accelerate skills development, and deepen cross-sector collaboration. For instance, recognizing the scale of the challenge, we launched **Beyond125.org** to reach 10,000 NGOs with essential cyber and AI skills. In collaboration with **Common Good Cyber and the GFCE,** we are activating a global coalition to protect those who protect others.

- By measuring the real-world harm of cyberattacks through the **CyberPeace Tracer**, which monitors targeted attacks on civil society, we transform threat intelligence into actionable protection strategies and capacity-building priorities rooted in lived impact.

- Through the **CyberPeace Builders**, we are empowering 400+ NGOs with cybersecurity skills and threat intelligence, supported by 50+ corporate partners and 1,300+ volunteers.

Concrete achievements

- The **CyberPeace Academy** and **AI Skills Initiative** equip non-profits to both defend themselves and harness AI responsibly.

- We have developed knowledge products available to the whole community, including the **Cybersecurity Assessment Tool** to guide nonprofits to identify and close security gaps and **Harms Methodology** for measuring and communicating the real-world impact of cyberattacks on nonprofits.
